About Symphony

For more than **3 decades**, we have been innovating efficient and sustainable cooling solutions for a greener tomorrow. Founded in 1988, we established a new category of evaporative cooling in India and expanded it globally, to become a **leading** air cooler company.

Our extensive research and development methodologies help us engineer pocket-friendly solutions to combat climate change. We have passionately devoted years of hard work to make air cooling accessible, efficient and sustainable for us and the generations to come.

At Symphony, we think about tomorrow, **TODAY.**

Symphony Coolers are engineered to
reduce carbon footprint equivalent to planting

14 TREES*

per cooler and **consume only 10% energy vs air conditioners.**

EVAPORATIVE AIR COOLING

Evaporative air cooling is the most efficient and environment-friendly cooling technology which works on the principle of heat absorption by water evaporation.

- ▶ A pump circulates water from the tank on to a cooling pad making it wet.
- ▶ A fan/blower draws hot air from outside the unit and forces it through the moistened pad.
- ▶ As the air passes through the wet pad, it gets cooled by evaporation.
- ▶ The blower and motor are sized and designed to deliver the appropriate airflow.
